

Executive Summary: Food Delivery Platform Performance Analysis

1. Project Overview

This report provides a comprehensive analysis of the performance of our food delivery platform across four major cities: **Bangalore, Mumbai, Hyderabad, and Delhi**. The goal is to identify growth drivers, customer behavior patterns, and operational bottlenecks to improve overall profitability and customer satisfaction.

2. Key Performance Indicators (KPIs)

Metric	Value
Total Orders	250
Total Revenue (Net)	INR 317,801.26
Avg. Order Value (Gross)	INR 1,594.49
Average Customer Rating	2.98 / 5.0 ⚠
Average Delivery Time	52.52 Minutes ⚠
Customer Retention (Repeat %)	38.0%

3. Market Performance (City-wise)

Bangalore is our leading market, contributing the highest volume and revenue. However, performance is relatively balanced across all four cities, indicating a stable multi-city footprint.

- Bangalore:** INR 84,748 (Top Performer)
- Mumbai:** INR 79,934
- Hyderabad:** INR 76,861
- Delhi:** INR 76,258

4. Operational & Customer Insights

⚠ Critical Concerns: Satisfaction & Speed

- Low Rating:** The average customer rating of **2.98** is below the industry standard. This suggests issues with food quality, packaging, or delivery experience.
- High Delivery Time:** An average of **52.5 minutes** per delivery is likely a primary driver of the low ratings.

- **Retention:** 38% of our customers are repeat users. While healthy, there is significant room to grow this through loyalty programs.
- **Spending Habits:** Repeat customers tend to have a higher lifetime value, making their retention critical for reducing acquisition costs.

Restaurant & Payment Trends

- **Most Popular Category: Fast Food** leads in order volume (72 orders), followed closely by Cafes.
- **Payment Preference: UPI** has emerged as the most preferred payment method, highlighting the need for seamless digital payment integrations.

5. Strategic Recommendations

1. Reduce Delivery Lead Times:

- Optimize rider routing in high-volume areas (especially Bangalore).
- Partner with restaurants to reduce "Kitchen Preparation Time."

2. Improve Customer Experience:

- Launch a "Quality Guarantee" initiative for restaurants with ratings below 3.0.
- Implement a feedback loop to identify specific reasons for low ratings (e.g., cold food, missing items).

3. Boost Retention:

- Introduce a tiered loyalty program for the 62% of one-time users to convert them into repeat customers.
- Offer "Free Delivery" for repeat orders within a 30-day window.

4. Promote High-Margin Categories:

- While Fast Food is popular, **Cloud Kitchens** show slightly better average ratings (3.18). Scaling Cloud Kitchen partnerships could improve overall platform sentiment.
